# Who is Sytech?

**“Our focus is on supporting our customers to achieve their best work all of the time”**

- Malcolm Groger  
(Founder of Sytech Supplies)

In the 90's, signage supplies veteran Malcolm Groger launched his company, Computer Plus. Computer Plus then merged with another wide format printing company. However, after discovering that the two companies had separate visions, Computer Plus was spun off on its own and in 2002 Sytech Supplies was launched.

Today, we are currently a leading importer, distributor and reseller of digital print vinyl, colour sign vinyl, outdoor display solutions, dye sublimation systems & equipment, flexible PVC substrates, PVC signex board and finishing solutions.

Our product range also includes PVC heat transfer products, dye sublimation inks, heat transfer

equipment and material, banner printing fabrics, outdoor display solutions and signage, branding and promotions consumables.

We are the official African brand partners and importers of products by Metamark (signage and digital printing vinyl), KPMF, ProMedia (sign solutions), Triline, Forever Digital Transfers and PVC signex board. We are also the South African distribution partners for RTape application tapes. We have a range of liquids including liquid laminates and cleaning products suitable for an array of surfaces. We also stock an in-house brand, known as the "Ezee" range, featuring finishing products. The highly innovative Ezee Applicator, manufactured by our very own staff,

reduces time wastage and suits a multitude of application needs.

We are based in the city of Durban on the east coast of South Africa - the metropolis boasting the busiest marine port in Southern Africa. From here, we have managed to build a strong brand presence in every major city in South Africa. Our footprint also covers the Johannesburg city and several African countries. We offer full training and consultation on the use of all products we stock and have a dedicated team to answer all of your questions.

We use our years of experience in this industry to source the best brands that you know & trust to be the best of the best. This ensures that years down the line, your product will still be supported.

We ensure that the products we source are fully tried & tested, giving you the peace of mind you need to ensure all your projects are completed within the scheduled time.

Our product variety ensures that you do not need to waste time searching elsewhere for all your sign-writing requirements. You will be pleasantly surprised to find that we keep all your signage and graphics needs under one roof & at the best price possible.

# CLIMATIC ZONES & VINYL DURABILITY

*The outdoor durability of vinyl products based on regional climate.*

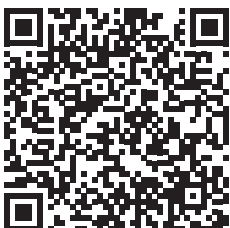

Dear Customer,

Kindly note that the lifespan of vinyl films is dependent on the zone in which the vinyl is applied. The regional climate (zone) of a country is the main factor which will reduce the expected performance, along with the angle and exposure of the application. Other factors include preparation of the substrate, method of application, cleaning and maintenance process.

Sub-Saharan Africa experiences a harsher climate and as a result, lies between zones 2 & 3. This means that vinyl films actually have a shorter lifespan than the product standards indicate in this catalogue. These product standards are as per the specifications of our suppliers.

The zone that you are in impacts the durability of the vinyl so it is imperative that you select your media wisely when purchasing any of the following products. The expected durability in each zone differs from brand to brand. If you have any questions about zonal conditions, it is suggested that you chat to one of our trusted sales reps to find out which products work best for which applications.

For more information, check out our blog page: [Download our free durability guide here:](#)

**Squeegees**

	Hard Grade	Felt Block	Felt Edge Squeegee
	A hard compound squeegee for everyday use on flat to gentle curves, also used for a wide range of signage and graphic needs.	The 12mm felt block squeegee from Metamark allows for a soft and scratch-free vinyl application.	This innovative 2-in-1 squeegee from Metamark has the perfect blend of a soft grade edge and felt scratch-free edge for a smooth glide through signage and graphics.

**What is mottling?**

**What are its effects and how can it be removed?**

Mottling of films is a common issue caused when the pressure of the surface onto the film is too high. It is an inherent feature of soft films and is a temporary characteristic of the finish.

Scan the QR code below for more info and the removal of mottling.

ApliTape 4075 is a standard grade paper saturated paper application tape, coated with a high tack rubber adhesive.

Great choice for most sign shop applications from small and medium graphics to large plotter cut letters.

**Features**

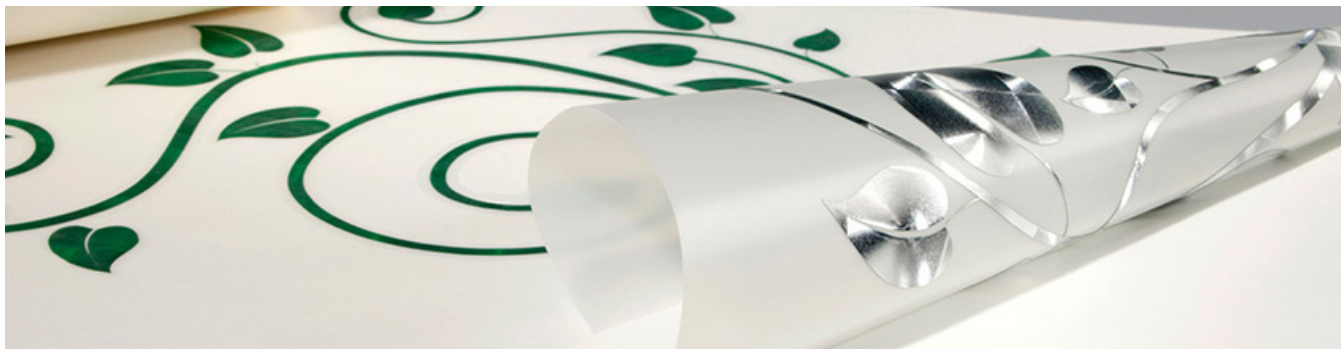

- Standard paper premask
- Low tack rubber adhesive

**Benefits**

- Transfers small to medium sized graphics
- Transfers large plotter cut letters
- Removes easily following application
- Large plotter cut letters

ApliTape™ 4075

Clear Choice AT65 is an ultra-clear, high tack film application tape that provides exceptional performance and versatility for the widest range of sign applications. AT65 is the tape you will want to keep on hand. It's high tack adhesive system is especially well suited for transferring small, high detail cut graphics and intermediate calendared vinyl films with tight liner release. AT65's exceptionally clear film face stock allows for precise registration of multiple colour overlays, while the rigid polypropylene film minimizes stretching for precise alignment of graphics.

**Features**

- High tack adhesive
- Easy unwind
- Exceptional lay flat characteristics
- Resists tunneling and curling
- Re-usable

**Benefits**

- Universal performance for wide range of applications
- Extended shelf life even after lamination
- No milky residue when used for wet applications
- Applications
- Small, high detail cut graphics
- Vinyl films with tight release
- Multiple colour graphic overlays

ClearChoice® AT65

We are the official distributor of KPMF products in Sub-Saharan Africa.

# WRAP WITH CONFIDENCE.

KPMF's range of classic vehicle wrap products are designed for applications including total vehicle coverage and graphics. The material is designed to be removable, under controlled conditions, up to a period of 5-7 years without leaving adhesive transfer. The 100 micron thickness offers

excellent cutting and weeding properties making it perfect for signs and decal applications. Our KPMF series of wrap vinyl offers superior quality, soft PVC films formulated using the latest advances in pigment technology. Offering exceptional dimensional stability and long-term durability.

## Gloss/Matte

The K88 000/ K89 000 series are formulated using the latest advances in pigment technology to form superior quality soft hybrid PVC films. Perfect for vehicle coverings and graphic applications, the VWS 1 offers exceptional dimensional stability and long-term durability as well as superb cutting and weeding properties.

The original hybrid wrap (VWS 1)  
[K88 000/K89 000 series]

Thickness	Construction	Width	Printable
100 Micron	Hybrid PVC	1524mm	Yes

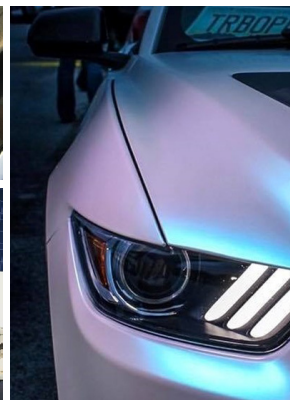

## Starlight/Pearlescent

The K75 000 series include Starlight and Pearlescent products that are both dual cast PVC films specifically developed for vehicle wrapping where a unique and innovative finish are needed. Formulated using the latest advances in pigment technology to offer exceptional dimensional stability. The VWS 4 is suitable for both interior and exterior applications.

Luxury effects films (VWS 4)  
[K75 000 series]

Thickness	Construction	Width	Printable
100-110 Micron	Cast	1524mm	No

Produced on KPMF's Airelease Premium air release liner.

Produced on KPMF's Airelease Premium air release liner.

## Metallic

Formulated using the latest advances in pigment technology to offer exceptional dimensional stability, long term durability and amazing colour options.

The K75 000 series is an assortment of premium quality cast PVC films specifically developed for vehicle wrapping. The VWS 4 is suitable for both interior and exterior applications, available in gloss and matte finishes.

### Matte and gloss metallic film (VWS 4) [K75 000 series]

Thickness	Construction	Width	Printable
80 -100 Micron	Cast	1524mm	No

Produced on KPMF's Airelease Premium air release liner.

## Super High Gloss

High glossy vehicle wrap consisting of a premium quality, soft PVC film topped with a clear coating supplied on a polyester liner. It offers exceptional high gloss appearance, increased durability and scratch resistance. Developed for panoramic roof applications, perfect for vehicle graphics, sign and decal applications.

### High gloss vehicle wrap

Thickness	Construction	Width	Printable
120 Micron	Hybrid	1220,1524mm	No

Produced on KPMF's Airelease Premium air release liner.

## Iridescent

Available in a gloss and matte finish, the iridescent range is formulated using the latest advances in pigment technology to offer exceptional dimensional stability, long term durability and amazing colour options.

The K75 000 iridescent products are dual cast PVC films specifically developed for vehicle wrapping where a distinctive colour effect is desired. The VWS 4 is suitable for both interior and exterior applications.

### Iridescent colour shift film (VWS 4) [K75 000 series]

Thickness	Construction	Width	Printable
80 -100 Micron	Cast	1524mm	No

Produced on KPMF's Airelease Premium air release liner.

## Laminate

The luxurious and innovative overlaminates transform any application with the creation of a sparkling starlight or subtle pearlescent appearance. K71 000 series are high quality cast overlaminate films that were developed for use as vehicle wrap overlaminate, also in the digital imaging industry. The films allow the user to produce unique custom colours. A benefit, they permanently enhance and promote both solid colour and print media.

### Speciality over laminate

Thickness	Construction	Width	Printable
60 Micron	Cast	1524mm	No

This brand offers a range of sign making media, ranges extensively from printable vinyl, sign boards, building cladding, to overlaminates and more. ProMedia is a sub-brand by Sytech Supplies.

## ProMedia Rigids

Sign-makers and building contractors use our boards for all kinds of wall and facade cladding applications and is perfect to give dull looking buildings and interiors an inexpensive face-lift. You will constantly return for more thanks to the exceptional quality & durability of the products.

### AluBond

A light-weight PVC sandwiched between 2 sheets of aluminium, Alubond is available in a the colours black, white and red to suite every requirement you may request. Comes in a gloss and matte finish. Ideal for outdoor use.

Available in 1.22m x 2.4m and 1.5m x 3m sheets.

ELECTRIC SAW CUTTING

MECHANICAL CUTTING

ROLL BENDING

MECHANICAL PUNCHING

GROOVING

FOLDING

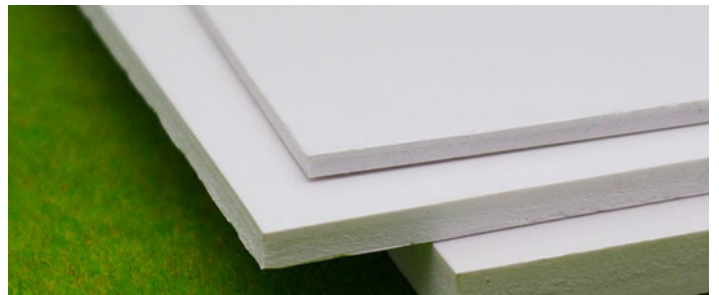

### SignArt

#### Foam board

Our light-weight foam board has a polystyrene center sandwiched between thick cardboard. Ideal for indoor use.

Available in 1220mm x 2440mm sheets.  
Gauges are available in 10mm.

### SignEx

#### Compressed Foam board

SignEx is a light-weight, rigid PVC foam board and is perfect for various applications like posters, cut-out applications & printed laminates. Ideal for indoor use.

Available in 1.22m x 2.4m sheets. Gauges are available in 2mm to 30mm. All available in white.

### Sandwich boards

#### 'A' frames

Sandwich boards are a brilliant way to draw in street traffic. It optimizes visibility to consumers with its double-print side advantage. Our boards are made from chromadek, making them light and durable and is perfect for industrial signage.

Available in 975mm X 500mm

# ProMedia Liquids

Our unique range of ProMedia products suitable for cleaning and restoration serves an array of functions including removing sticky adhesive residue from surfaces like glass, steel, and more. It's a must-have for both your professional and personal cleaning collection.

## AppliKleen

Surface cleaner

Cleans delicate surfaces before vinyl application (like vehicles, trophies, etc) and evaporates quickly leaving your surface clean and dry.

## GluGon

Adhesive remover

This product is used in removing adhesive from chromadek, steel plastics, acrylics, glass, wood, PVC, ABS and more.

Do you own a sign-making business or apply stickers, signage, and decals onto products? How would you get sticker adhesive off of a part when you are ready to put the next one on? Check out our video on how to use this amazing tool.

Both chemicals are available in 500ml spray bottles

## LiquiShield

Liquid laminate

ProMedia LiquiSHIELD is a high gloss urethane based liquid laminate. It is highly flexible yet hard-wearing and provides long-term protection against abrasion. It also chemical and UV resistant. LiquiShield is used as a top coat to protect signage like ABS boards, PC boards, vinyl, PVC decals, banners, Fiberglass, wood, metal and plastics.

### Properties

- Gloss appearance
- Excellent flexibility
- No yellowing
- Low odour
- Non-flammable
- Zero tack level

### Intermediate

Created for high performance. Designed for long-term, outdoor signage requirements. It has a high gloss finish.

Available in a 1L easy pour bottle

## TIPS FOR APPLYING SIGNAGE VINYL IN COLD WEATHER CONDITIONS

We are now entering an unfavorable season for vinyl. In cold conditions vinyl can become brittle and harder to cut, leading you to have to adjust the cutting depth. It can also

make application difficult, as the initial adhesion of the vinyl will be reduced and the time taken for the adhesive to cure completely will be longer.

### PRE-APPLICATION:

Make sure to preheat your surface before application. When applying vinyl to a surface in cold weather always try to work indoors and raise the temperature of the surface by using a fan heater. Also, make sure the heater is constantly on whilst applying your vinyl.

\* When this is not possible, for example, in an exterior application in winter conditions, it is essential to make absolutely sure that the adhesive has established an excellent

bond to the surface.

### POST APPLICATION:

After applying vinyl to a surface, post-heat the vinyl to ensure the tack of the vinyl sticks to the surface. It is advised that you should wait at least 48 hours before switching on the air conditioner to prevent the vinyl from peeling off the surface.

Follow these steps over and above your normal vinyl application routine to help ensure a perfect finish!

# ProMedia DigiLine

Our DigiLine range is an important part of our ProMedia brand. It is extremely popular due to the low cost and high quality of this vinyl.

## Digiline 3G & 5G

The DigiLine 3Gw (monomeric) and 5Gw (polymeric) are specially designed for applications that require high stability. It has excellent indoor and outdoor durability and is suitable for flat and slightly curved surface applications. They perform best in conjunction with a recommended laminate, and the adhesive's colour completely prevents the passage of light, conferring outstanding opacity to the final product.

### 3G White

Features:

- Digital print vinyl
- 3 year durability
- Monomeric
- 100 micron

3G WB (white back) GLOSS 1370 wide  
3G GB (grey back) GLOSS 1370 wide

3M WB (white back) MATTE 1370 wide  
3M GB (grey back) MATTE 1370 wide

3G WB (white back) GLOSS 1520 wide  
3G GB (white back) GLOSS 1520 wide

### 3G Clear (Laminate)

SHIELD 3G is available in a gloss/matte finish with a face film thickness of 70 Micron and a durability of 3 years.

Features:

- Non-printable
- 3 year durability
- Monomeric
- 70 micron

Shield 3G GLOSS 1370 wide  
Shield 3G GLOSS 1520 wide

Shield 3M MATTE 1370 wide  
Shield 3M MATTE 1520 wide

### 5G White

Features:

- Digital print vinyl
- 5 year durability
- Polymeric
- 75 micron

5G GB (grey back) GLOSS 1370 wide  
5G GB (grey back) GLOSS 1520 wide

5M GB (grey back) MATTE 1370 wide

### 5G Clear (Laminate)

Ideal for lamination and protection of medium to large sized prints (whether water, solvent, latex or UV) on flat surfaces. It is UV stabilised (prevents colour fading) and offers protection against fingerprints as well as mechanical, chemical and abrasion resistance.

Features:

- Non-printable
- 5 year durability
- Polymeric
- 75 micron

Shield 5G GLOSS 1370 wide  
Shield 5G GLOSS 1520 wide

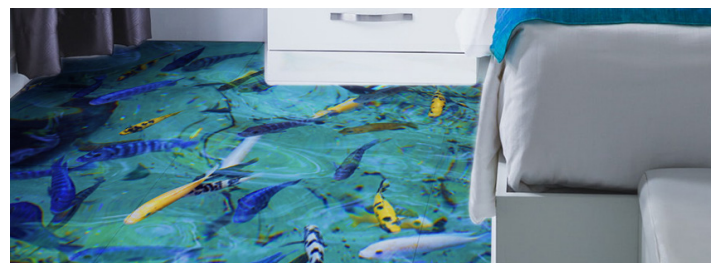

Shield 5M MATTE 1370 wide

## SHIELD 200

### Floor Graphic Overlaminates

Our SHIELD 200 has a 200-micron gauge, and provides durable protection to digital floor graphics. It is easy to see why this overlaminates is the first choice with sign makers when protecting digital floor graphics.

Available on a 1.27m x 50m roll.

## Digiline DecoFilm

### Silver Etch Window Film

This media ensures low visibility with high light transfer which is perfect for applications onto glass surfaces such as office or shower doors. This printable vinyl is primarily used for cut-outs and dry applications although wet applications can be successful as well.

Available in 610, 1220, and 1520 wide

## Ultra Tack

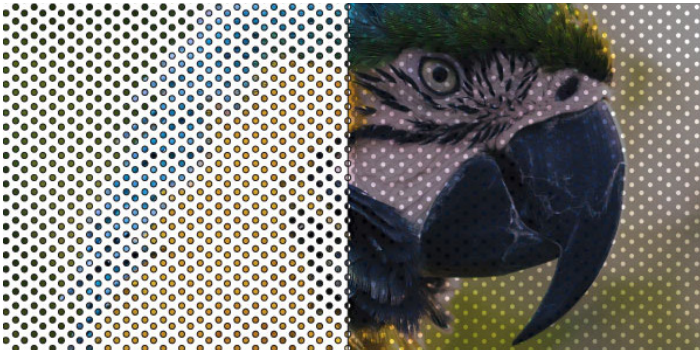

### Wallpaper vinyl

Our ProMedia Ultra Tack is one of our most powerful self-adhesive PVC films yet.

It is a printable 100 micron vinyl that features a thick clear glue and a release paper with double-sided PE coating.

Producing the best high-end print results. It is ideal for indoor and outdoor signage, product labels, and wide-format digital printing.

**Available in matte and gloss white  
on a 1370m x 50m roll.**

## Contravision

### OneWay Vision vinyl

Our contravision vinyl is specifically engineered with a semi-permanent adhesive to make your life easy during application & removal of this product. It's a satin white 160 micron vinyl.

**Available on a 1.37m x 50m roll.**

## Eco-Vinyl

### Economy vinyl

Our ProMedia Economy Vinyl is designed to its name - to be efficient for work and for your pocket.

It is a 100 micron vinyl. It is best suitable for fast-moving goods like labels for water bottles and short-term indoor signage.

**Available in Grey back & White back, gloss & matte.  
It is available in 1370mm wide x 50m rolls.**

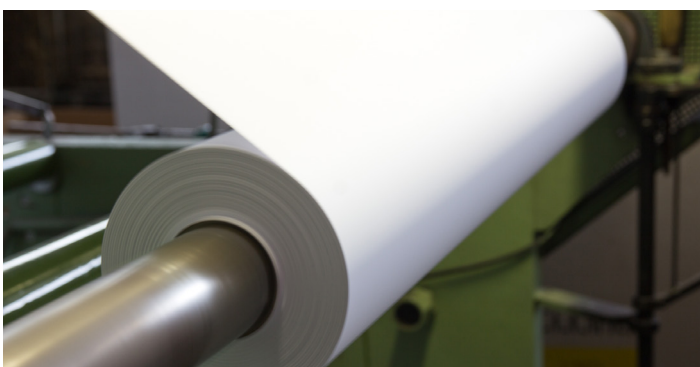

## Photoluminescent

### Glow in the dark

Our Photoluminescent digital film has the initial lighting source of 1000LX and its activating time is 15 minutes. It has a gloss finish and is available in a light green colour. It has a durability of 8 years indoors and 5 years outdoors (unprinted).

**Available in 124cm x 45.7m rolls.**

*Please note that our Photoluminescent is not SABS approved.*

## ProMedia Papers

### Synthetic Paper

### Poster Paper

Ideal for your poster project requirements. It is tear resistant with a satin finish and is sold per roll.

**Available in 50mx1520wide, 190gsm.**

## Plotting Paper

## Printable Paper

Ideal for indoor signage like storefronts and short term posters.

**Available in 80gsm in 50m x 1270wide, 50m x 610wide, 100m x 1370wide**

## ProMedia Textiles

### Black back PVC

Our banner material is made with vinyl and polyester mesh (scrim). The scrim provides for added strength and durability. This printable material is very smooth because it consists of a high denier count. It is suitable for both indoor and outdoor banners (can be used for company recognition, birthday banners, hanging banners, etc.).

**Available in matte finish. 510gsm, in width sizes 1370mm, 2640mm and 3200mm.**

### Canvas

### Anti-scratch Poly-cotton canvas

Our printable poly-cotton canvas base fabric features 80% polyester and 20% cotton. It is an eco-solvent/UV/Latex and has anti-scratch properties. Designed with a matte surface and yellow back with high tensile strength and 380gsm. Our superior canvas is notoriously used for indoor/outdoor signage, block mounts, printing, painting, and more.

**Available in a width size of 1370m on a 30m roll. Meter sizes are also available.**

### Backlit Samba

### Backlit Textile for light boxes

Our backlit Samba textile is 100% polyester wrap knitted fabric with acrylic coating and has an excellent performance with backlit displays. Both sides are printable.

The film can be used with light boxes, gazebos and parasols (sun umbrellas). With a matte finish, 80% opacity and a UV, latex, solvent (test first), eco-solvent (test first).

**Available in 3200 wide rolls with a length of 50m.**

## ProMedia Display

### Hanger Kits

With four different options to choose from, our comprehensive and affordable hanger kits are perfect for hanging an array of media. The kits offer two 200mm rails, in addition to two hanger clips (or hooks with wire), four end caps to securely keep the media in place, and one hanger kit for the poster.

- Hanger Kit 1: 2x 1m length wires + 4 set of screws
- Hanger Kit 3: 2x 1m length wires + 2 Hooks
- Hanger Kit 4: 2x 1m length wires + 2x 5mm clamps
- Hanger Rail Set: 2x 2m length rails + 4 clips + 1x Hanger Kit 3

## Standoff Spacers

Pointed

Flat

Rounded

A Standoff is a decorative fastener used to mount a sign panel to a wall or other surface.

As an alternative to ordinary sign frames and poster frames, sign stand-offs mount sign panels in an upscale, modernized way.

A sign display system created with sign stand-offs results in a three-dimensional design, as your panel is positioned away from the wall for a dramatic, eye-catching effect.

**Available in stainless steel and aluminium in over 50 different sizes.**

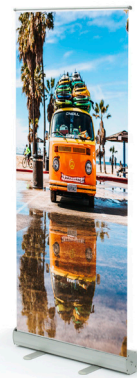

## Banner Stands

### Luxury Roll-up

Our luxury roll-up banner is appropriate for all affordable signage needs. This impressive roll-up banner has specialised chrome end caps, and a wide base for added support and durability of the media. It is suitable for exhibition stands, while the standard option boasts a rigid aluminium base.

**Available in 850 x 2000mm**

### Standard pull-up

Our standard pull-up banner stand is our most popular and it's easy to set up and use. This banner is an ideal option if you're moving between events. It sports an aluminium base with two legs that pivot outwards.

**Available in 850 x 2000mm**

## Dad's who've shaped the industry

The signage industry has been built on the successes, rework and necessary failures of many noteworthy dads in the industry who are posthumously revered today.

One of these men is the inventor of vinyl chloride. Vinyl chloride was initially discovered in 1837 by the French physicist and chemist, Henri Victor Regnault. Even though this initial version of PVC needed a lot of work, the dad of one can be noted as the creator of what we acknowledge, love, use and treasure like gold in the signage and graphics industries today. Without his contribution, we definitely wouldn't be at this stage presently. Another interesting fact

People often stopped to admire the first neon signs coined "liquid fire."

about Regnault is that he reared a legend – similar to himself of course! He did not only contribute to our industry, but he also contributed greatly to his son's life, who went on to become a talented and notable French musician.

However, Regnault is not the only dad who has managed to shape the industry in a significant way.

### "Liquid fire"

The French engineer, chemist, and inventor, Georges Claude, was the first person to apply an electrical discharge to an airtight tube of neon gas.

In the 1920s, the father

of three and his French company Claude Neon, introduced neon gas signs to the United States, by selling two signs to a car dealership located in Los Angeles, California.

Neon lighting quickly became popular in outdoor advertising. Evident even in daylight, people often stopped to admire the first neon signs coined "liquid fire."

### Ørsted's overlooked discovery

Another material that is respected in the industry is Aluminium composite material (ACM). This material is useful for wall cladding, road signs and so much more. Without aluminium, the aluminium based sandwich panel clearly would not exist

today. Hans Christian Ørsted was the discoverer of aluminium metal. The father of four was a famous Danish physicist, who actually didn't give much thought to his discovery of the metal.

The beauty of the signage industry lies in the physics and innovation behind the creation of products.

Although vinyl and neon signs remain extremely popular and favoured, today we have reached a destination which involves technological innovation and the world wide web. You can be sure that even presently, there are many dads who work around the clock to ensure that the signage industry remains viable and that their kids are well looked after.

The NEW PolyTack and PolyGuard series from MotoFX. Extensively used for motocross applications exposed to rough handling conditions.

## PolyTack

### Printable Vinyl

Our PolyTack series from MotoFX is a 100 micron polymeric PVC printable vinyl that creates durable labels and graphics extensively used for dirtbikes, quadbikes, and more motocross applications exposed to rough handling conditions.

### Features

- Sticks to hard to adhere surfaces
- Exceptional dimensional stability
- 7 years outdoor durability
- PE coated lay-flat kraft liner

### Printability

- UV
- Solvent
- Eco-Solvent
- Latex

Available in gloss white at 1370mm wide with a permanent solvent-based adhesive.

## PolyGuard

### Overlamine

Our PolyGuard series from MotoFX is a 300 micron polymeric PVC hi-tack laminate that gives your graphics the optimum protection when combined with our PolyTack. It is extensively used for dirtbikes, quadbikes, and more motocross applications exposed to rough handling conditions.

### Features

- Gloss optically clear
- Extremely high durability
- 5 year UV protection
- PE coated kraft liner

Available in gloss optically clear at 1370mm wide with a high-tack permanent solvent-based adhesive.

This brand offers a range of film rollers, squeegees, magnets and more. We supply the necessary accessory tools you require for that perfect wrap!

**Squeegees**

Vinyl squeegee with felt edge.

**Rollers**

Silicone vinyl car film rollers. Available in 4" or 6".

**13 Piece Wrap Tool Kit**

- 1 x Rubber jelly squeegee with handle
- 1 x Black conqueror squeegee
- 1 x Blue felt squeegee with fabric felt
- 1 x Pink mini scraper
- 1 x White block squeegee
- 1x Handle white squeegee with soft handle
- 1x Yellow round head corner reach squeegee
- 1x Orange magnetic vinyl stick
- 1x Red micro stick squeegee
- 1x Mini plastic scraper
- 2 x Grey mini plastic squeegees
- 1x Grey squeegee with a protective cloth

**Vinyl Magnet Holders**

Strong magnet holders. Available in a 4 piece pack (2x magnets and 2x handles)

**Micro Squeegees**

Flexible micro wrapping squeegee sticks. Available in a 3 piece set with a sliding case.

**Knife-less tape**

Introducing our new knife-less tape made for vehicle wrapping.

Available in 3.5mmx50m roll.

**Vehicle Wrap Nylon Gloves**

- Latex-free
- Soft feel
- Anti-static
- Prevents hand & finger prints left on vinyl.

This brand offers a range of heat transfer vinyl for garments. Flexx is a sub-brand by Sytech Supplies.

## VideoFlexx

### Elastic Foil

A stretching metallic polyester vinyl that creates shimmer and prism effects on garments.

Once it is transferred it stays soft and flexible. It has high washing fastness and easy weeding.

It is ideal for:

- Elastic fabric
- Leather
- Artificial leather
- Most fabrics

#### Properties

- Self-adhesive backing
- Hot peel

### Flock (Suede)

Flock is a viscose pile based heat transfer vinyl that provides a raised look and feel of soft velvet. Flock can be a low-priced & easy alternative to embroidery. As Flock is thicker than most of our other vinyl, it is suitable for large design.

#### Properties

- Provides 3D look and feel of soft suede
- Ideal for fashion wear
- Cool peel

### Flake

The products name, Flake, come from the fact it has actual glitter flakes encased in a high adhesive hot melt. Polyester based flakes can create brilliant sparkle and shine to fashionable garments. It is available in roll form and can be used with a vinyl cutter, flatbed cutter, or hand cutting. Most materials can be applied with only a heat press on garments.

Stocking heat transfer materials and cutting in-house is a great way to personalize apparel on-demand.

#### Properties

- Thick texture and 3D looking
- Ideal for dance uniforms and for adding 'Bling Bling' effect to garments.
- Cool peel

### Vent Hole

Vent hole is a breathable heat transfer vinyl based on highly flexible polyurethane material.

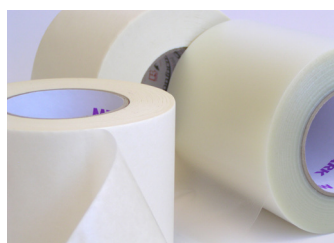

Vent hole has excellent ventilation and is good for sportswear or uniforms. Vent hole can also apply all kinds of garments without limitation.

letters, numbers and figures

- Excellent for air circulation through the holes
- Lighter weight on garments than normal PU vinyl
- It is also good for all kinds of garments
- Need more focus in the weeding process
- Cold peel

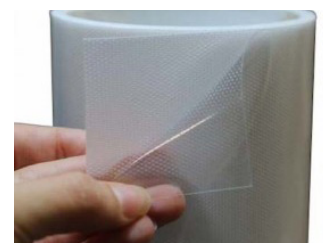

#### Properties

- Suitable for one colour

## Flexx Application Tape

The application tape is a heat transfer film equipped with a special hot melt adhesive for application at lower temperatures like 129°C. The tape is also used to pick up and apply ColorFlexx when dealing with it.

## 3D PU

It is made of Polyurethane foam. This works as a soft cushion between the top layer of the graphic and the piece of clothing.

### Properties

- Easy & smooth weeding
- Great flexibility
- Adds a 3D effect to garments

## Glow-in-the-dark

Glow in the Dark is polyurethane based material which casts a gentle glow when the light is out.

Glow is ideal for decorating T-shirts or any garments that frequently need to stand out in the dark.

### Properties

- Making a glowing effect on garment
- Polyurethane based
- Absorbs and stores light and gives back glowing light in darkness.

## Plate & Hologram

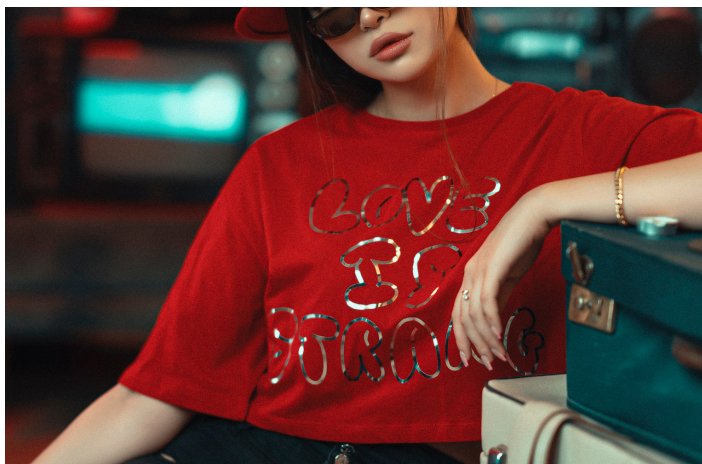

Plate and Hologram are metallic and holographic polyester vinyl that creates shimmer and prism effects on garments.

The polyester vinyl are dimensionally stable and durable against abrasion.

It is Ideal for costumes, kid's wear, dance/cheer leader's uniforms.

### Properties

- Application to Vinyl Cutter
- Polyester based materials
- Self-adhesive backing
- Smooth cutting and easy weeding
- Excellent washing resistance.

## Soft PU (Polyurethane)

PU has clean cutting lines and its smooth weeding decreases the production time and increases productivity and quality.

The carrier film has an adhesive backing that allows for small and delicate cuts and the hot peel makes it easy to remove the carrier film immediately after heat pressing. It also has a

strong ability to withstand frequent washing with no discoloration or peeling.

### Properties

- Strong adhesion
- Stretches naturally
- Excellent durability
- Soft, thin texture is lightweight
- Merges well with clothing.

Want to design a t-shirt with heat transfer vinyl but don't know what to get? Get your hands on our new HTV swatch booklet now available for purchase!

This colour chart booklet contains a range of heat transfer vinyl that we have to offer. It also features a heat transfer application and washing guide.

This swatch book is an excellent resource for people who are just starting out with heat transfer vinyl, as well as those who are looking for inspiration to create their next design.

*\*\*\* Please note that all transfer papers in the FOREVER range are sold in A3 pages. \*\*\**

### Laser-Light (No-Cut)

**Suitable for white toner printers only.**

FOREVER Laser-Light (No-Cut) is a self-weeding, one step transfer paper for printing full colour logos, designs/ artwork onto white/ light coloured textiles. No residue in the unprinted areas provides a professional result with a long lasting and soft feeling print.

#### Print Substrates

- Cotton
- Paper products

### Laser-Dark New Generation

Laser-Dark New Generation is perfect for printing and cutting full colour logos, designs, and artwork when vinyl is simply too complicated or if you don't have a specific colour in stock. Think of it as a type of "printable vinyl" for Laser Printers. Laser-Dark New Generation is a print and cut transfer media for printing onto dark (or light) coloured textiles composed of 100% cotton, leather or denim. Simply print your design with registration marks then cut with scissors or a cutter/ plotter featuring optical eye functionality.

### Laser-Dark (No-Cut)

FOREVER Laser-Dark (No-Cut) is a self-weeding two paper system to produce vibrant prints with no residue in the unprinted areas. Allowing you to print full colour, high street quality results onto a vast array of textiles and materials.

#### Properties

- Image crystal clear reproduction
- High wash fastness
- Leaves no residue in the unprinted areas
- Full colour images and design
- Print fine detail

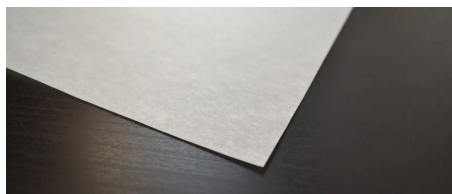

#### Print Substrates

- Cotton
- Polyester
- Mixed Fabric
- Nylon
- Silk
- Leather
- Paper and Book covers
- Wood
- Metal and more...

### Glossy & Matte finishing paper

- Complete your prints with either a matte or glossy finishing look.
- Essential for use in the curing/ fixing of pressed transfers.

### Laser-Light Classic & Universal

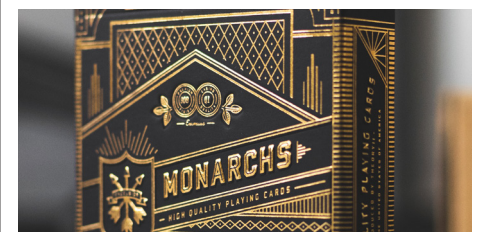

FOREVER Classic + Universal allows you to print up to A3. A3 images/ designs, breast pocket logos with skin tones, gradients and anything in between.

Classic + Universal leaves residual impact, simply trim around your image/ design with a pair of scissors or a cutter/ plotter featuring optical eye functionality prior to pressing onto your substrate to reduce this impact.

#### Properties

- Easy Press
- Hot Peel
- Short Runs
- Full Colour
- Large Runs
- Quality Print

### Multi-trans Select (Gold & Silver)

You can now bring a little style and luxury to Paper, Card & Wood products. It prints in black but transfers in gold and silver. This would be the ideal solution to quick & easy invitations with a foil finish and regal look.

#### Properties

- Image crystal clear reproduction
- Leaves no residue in the unprinted areas
- Full colour images and designs.

Light Silk textiles or substrates.

### Properties

- Paper-System
- Fast & Easy
- No Background
- High Wash ability
- Soft Touch
- No Cracking
- High Stretch
- True Black

## ColorFlexx (Printable Heat Transfer Vinyl)

**\*\*\* Please note that our ColorFlexx is sold per meter \*\*\***

Our printable PU White is a popular printable material. It is a polyurethane based film that is specially developed for a soft and stretchable touch with a large format Eco-Solvent printers. This is suitable for colour photos, logos, lettering & numbering. It is popular due to its excellent colour absorption & bright colours.

Our printable Clear is good for color-only images without a background colour. These are great for light fabric transfers.

## SAWGRASS Texprint

### Sublimation Paper

Made with a significantly lower level of paper grain texturing, Texprint delivers high definition images with smoother solids, and more life-like skin tones. The smoother nature of the paper's surface helps to deliver sharper, crispier results, especially on

images that have smaller text. Texprint transfer paper (along with a Sawgrass sublimation printer) has durable, vibrant, and high-definition images. It is ideal for transferring onto: Ceramic, Metal, Fabric, Wood, Plastic, Mouse pads, Puzzles etc.

# Consumables and Accessories

## MUGS

Our popular 11oz mugs can be kept by some as an ornament, while others will relish taking a sip out of it instead.

# Transfer Presses

Using a heat press to decorate garments is an easy and cost-effective way to enter the garment decorating industry. Personalize a wide variety of items from T-shirts, caps, team uniforms, bags and fan wear for every industry, from the corporate industry to school clubs and small businesses.

## Mug Press

Our quick heating mug press is supplied standard with an element for 325ml mugs (85% of all mugs are 325ml). It does have an interchangeable head, so you can get the 10oz mug element (for beer steins, sports bottles etc) as an optional extra. It is easy-to-operate, easy to clean and easy to maintain.

It has both digital time and temperature control. It also has a soft heater liner for accommodating inconsistent mugs, and distributing the pressure evenly across the face of the mug.

## Cap Press

The cap press is built with a steel framework that is easy to use with an adjustable digital time and temperature settings.

The cap press also allows for transfer on many curved surfaces other than a cap it also transfers print on other items with a flat press, such as shirt collars, polymer dog and cat bowls, etc...

## T-shirt Press

Our heat press machine will assist you with the transfer of any design or graphic onto fabric. You may customize your heat press project with adjustable pressure, operating timer & temperature.

Our heat press machine boasts a 38cmx38cm (Clamshell) work area that heats up quickly and evenly using an aluminium heating element.

## Teflon mat for heat presses

Our non-stick Teflon mats for heat presses protect your cut-outs whilst you heat press it onto your garments/surface.

Available in 38cm X 38cm sheet.

Did you know that the global market for custom t-shirt printing is expected to witness considerable growth with shifting trends towards fashionable apparels? Fashion and branding forms part of our everyday lives. Read more about the heat transfer fashion trend here.

## Flatbed Application Table

The highly innovative Ezee Applicator is one of those products you simply cannot do without.

A sturdy and robust design makes the Ezee Applicator an Ezee choice for limiting time wastage, so that you can avoid the tedious task of spending hours applying media to a variety of substrates. You no longer need extra hands to assist aligning the media. Nor do you need to risk damaging the project while applying, leading to costly re-prints or re-cutting.

Countless hours of frustration &

time wasted are a thing of the past with our Ezee Applicator Series. Dry applications are here to stay with no mess & no fuss. There is a size to suit your exact requirements. All the models, excluding the EZA0, are backlit, to make sure you can easily weed fine-detail prints.

All of your application projects may now easily be manned by one person. The adjustable, pneumatically powered gantry controls make all lamination & application projects a breeze.

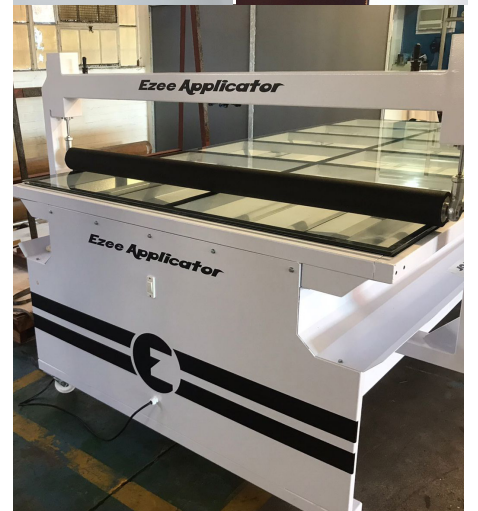

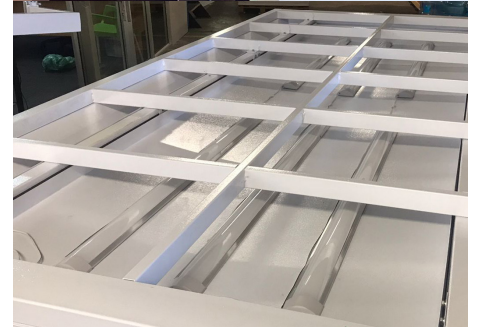

There are 3 sizes available for you to choose from:

- EZA0: 1450 mm x 860mm
- EZ2600: 2600mm x 1400mm
- EZ3200: 3200mm x 1600mm

EZEE applying to surfaces like;

- Foam board,
- Alu-panel,
- Glass,
- PVC board,
- Signex board
- Chromadek

Please take note that the product information in this product catalogue is subject to change at anytime without prior notice.
